## **YOUNGSTOWN® ENSURES SAFETY FIRST WITH LEATHER UTILITY PLUS™ GLOVE**

### **New Glove Goes a Step Beyond Offering High Quality, Comfort and an Impressive ARC Rating of 20.8 Cal/cm<sup>2</sup>**

When electrical utility workers need hand protection, they look to Youngstown Glove Company® renowned for creating utility gloves that provide superior safety and durability all with an incredible fit. Youngstown is proud to introduce the new Youngstown Leather Utility Plus™ glove which is ARC rated and NFPA 70E-2012 compliant resulting in a product that is truly a leap forward for the utility glove category.

The new Youngstown Leather Utility Plus glove can significantly reduce the risk of injury or death. You can be confident hands are safe with a glove that boasts a National Electric Safety Code (NESC) ARC rating of 20.8 Cal/cm<sup>2</sup> and ranks at a level 2 Hazard Risk Category (HRC). ARC ratings, or the amount of energy a fabric can withstand before the onset of a second-degree burn are fast becoming a standard to compare a number of products including gloves. Simply put, the higher the calorie rating the better. Also NFPA 70E-2012 compliant, the glove meets important electrical safety standards set by the National Fire Protection Association.

While safety officers are sure to be impressed with the glove's ARC Rating, workers will be wowed by the level of comfort and dexterity the glove provides. Youngstown understands the safest glove is useless if it doesn't fit comfortably and allow for excellent flexibility. Made to feel like a natural extension of the hand, the Leather Utility Plus glove is perhaps more than anything, comfortable. An ergonomic, 3-D pattern was created by Youngstown designers to provide a fit that contours to the curves and movement of your hand. An extra-wide pattern reduces hand fatigue and increases comfort.

Built to endure, the Leather Utility Plus glove is top-notch quality inside to out and is sure to withstand the long working days of professional linemen and electricians. The glove is constructed of 100 percent .9mm goatskin – an extremely durable material – which remains soft and supple even when wet. A double layer of goatskin is built into the glove for reinforcement at the fingertips, thumb, saddle and palm all adding to the overall life of the glove.

Additional safety features include a four-inch safety cuff for wrist protection and extra knuckle protection which helps to guard against bumps and scrapes. Few gloves can offer the level of flexibility and grip like the Youngstown Leather Utility Plus glove can. Precision sewing results in better tactility and nimbleness, meaning the wearer will be able to securely and tightly grasp objects. All this combined with its new ARC rating makes the Leather Utility Plus glove an impressive standout above and beyond anything Youngstown or any other company has developed in recent years.

The new Youngstown Leather Utility Plus glove is available in sizes small through XX large.

Youngstown Glove Company manufactures the world's most durable performance work gloves. Founded in 2002, the company has been unwavering in their commitment to quality, innovation and customer satisfaction. Offering more than 30 performance work glove styles available in sizes small through XX large, the company strives to exceed the demanding needs of professional workers. Every Youngstown style developed endures extensive testing – both in the laboratory and in the field – prior to being slipped onto customer hands. Thorough testing, proven patterns, innovative materials and meticulous quality control are all hallmarks of a company with a simple goal: to design the best working gloves you've ever owned.
