EMBARGOED UNTIL JANUARY 1, 2015

THE FOR 2015 NEW ARCHER XTREME™ RONIN BOW SIGHT

Designed in the Spirit of the Samurai, this 5-pin Sight is Manufactured for Precision

Many associate Samurai warriors with their namesake swords, but accuracy with bows was just as important. This ancient Japanese fighting force had to illustrate proficiency up to 330 feet with longbows. It is this type of precision and dedication to archery that led Archer Xtreme (AXT) to the design of its newest sight, the Ronin. This fully machined, lightweight and infinitely adjustable sight is sure to become a best seller among serious bow hunters and 3-D shooters.

Dependability is a cornerstone of all Archer Xtreme designs, and the Ronin may be the company's masterpiece in this space. A rail locking system increases the surface area of connectivity, which allows for unmatched rigidity in key areas. The sight is fully machined of 6061 T6 aluminum, giving it the perfect combination of light weight and unmatched core strength. Plus, all the hardware provided with the Ronin is stainless steel, so inclement weather and the toughest environments will not affect the performance or longevity of the sight.

As accuracy was demanded from the Samurai, so demanded Archer Xtreme of the Ronin. To ensure precision, a 2-inch HD Fiber Guard Sight Ring was developed to allow for quick target acquisition. Bowhunters will certainly appreciate this when hunting tight quarters in the deer woods. The Sight Ring also offers unbridled protection of the fiber optic sight pins to keep branches and thick brush from knocking the pins out of alignment. The AXT Ronin's micro adjustment knobs make dialing in your bow simple and dependable. Instead of guessing on windage and elevation movements, turn the knobs a specific amount of clicks to move the arrow millimeters to dead center.

Archer Xtreme is known for smart design, and the AXT Ronin continues this heritage. All five of the fiber optic pins feature the company's .019 Center Core Pin technology. This means the fibers are small, bright, and run through the center of the pin instead of running along the outside, like many other sights are manufactured. This offers unmatched protection of the fiber optics and keeps the pin from overwhelming small targets at far distances. For low light situations, Archer Xtreme has included a Micro LED, which can be turned on to illuminate the fiber optics. Plus, the sight was designed to be convertible and will fit both right hand and left hand bows.

All told, Archer Xtreme's new Ronin ushers in a new dimension of precision that affords archery enthusiasts and bowhunters with the lightest, strongest and most accurate 5-pin sight on the market.
