## **PROGRADE® HUNTING GRADE AMMUNITION - THE .270 WINCHESTER: PUTTING GAME IN HUNTERS' FREEZERS FOR DECADES**

### **Round Known for its Versatility, Flat Trajectory and Deadly Accuracy**

The .270 Winchester is arguably one of the best hunting cartridges ever developed. Offering plenty of punch without excessive recoil, the highly popular rifle cartridge was a no-brainer when it came to selecting rounds for the elite ProGrade® Hunting Grade ammunition series. Graceful in form and function, ProGrade experts have chosen four superior .270 Winchester loads to include in its Hunting Grade.

One of the true classic cartridges, the Prograde Hunting Grade .270 Winchester rounds have been chosen for their more perfect penetration ensuring cleaner, quicker kills. All four rounds are precisely hand-loaded in accordance with the most stringent procedures in the industry, which means you'll get the highest consistency and shot-to-shot accuracy available. With unparalleled performance, the .270 Winchester rounds load beautifully and fire even more so. The series features two Barnes rounds. The 129 gr. Barnes LRX cartridge has been developed to match the advancements in rifle accuracy and extended-range optics. It has a long profile and boattail design for match-grade accuracy at long range with an incredibly high ballistic coefficient for quick, clean and ethical kills. The 130 gr. Barnes Tipped TSX has earned its reputation as "the perfect hunting bullet." The round has a 100-percent copper body and a streamlined polymer tip which boosts BC and improves long-range ballistics. The cartridge retains 100-percent weight retention for a flat trajectory and creates more internal damage than any competing bullet.

The 150 gr. Nosler Partition rounds include the company's integral partition which supports the expanded mushroom and retains the rear lead-alloy core allowing the rear core to retain more than two-thirds of the original bullet weight for flatter trajectory and deep penetration. The round is constructed of fully tapered copper-alloy jackets, a dual-core for maximum in-flight and terminal performance and special crimp locks to resist deformation under the pressure of heavy magnums. The 180 gr. Woodleigh Weldcore PP SN or protected point soft nose have a high ballistic coefficient and sectional density making for a round that delivers superior all-around effectiveness. The long bullet is the heaviest and hardest hitting load available and an excellent choice for taking down everything from deer and elk to bears and moose.

ProGrade Ammunition has simplified the process of choosing ammunition by hand-selecting the best-of-the-best ammunition based on usage categories. With more than 250 variations in the complete line of pistol, rifle and rimfire ammunition, ProGrade has created ten grades of product — Defense Grade, Hog Grade, Varmint Grade, Cowboy Grade, Hunter Grade, Bear Grade, Range Grade, Match Grade, Safari Grade and Tactical Grade — for shooters of every caliber. The key to their full line of premium quality ammunition lies in part to the practice of their hand-loading process, which takes place here in the United States. In addition, ProGrade implements the tightest tolerances in the industry. Quality. Accuracy. Reliability. Safety. Together these hallmarks of ProGrade Ammunition ensure shot-after-shot consistency and guarantees unmatched and superior performance.
