## **RINEHART TARGETS® WOODLAND SERIES GOES HOG WILD WITH NEW JAVELINA TARGET**

### **Rinehart Adds the Challenging Javelina to the Innovative, Lifelike and Durable Woodland Series**

Janesville, WI — Rinehart Targets® have proven time and time again to be the most durable, authentic and lifelike archery targets available. The addition of the Javelina to the value-packed Woodland Series of archery targets brings yet another challenging game animal to your shooting enjoyment.

“Any hunter who has chased javelina with a bow can attest to just how challenging they are,” said James McGovern, President of Rinehart Targets. “We are all about bringing authentic, challenging game to our Woodland Series of lifelike 3D archery targets. That made adding the Javelina target to the catalog a no-brainer. Archers will find our Javelina target as challenging as the real thing.”

Javelina, also known as peccary, are native to Central and South America, with populations existing throughout the Southwestern part of North America as well. Although not a true member of the hog family, Javelina are similar in structure and behavior. This makes them extremely challenging to hunt with archery equipment as they have an excellent sense of smell, move fast and their coloration acts as a natural camouflage.

The Rinehart Woodland Series javelina has a solid, UV-resistant FX Foam body with a solid Signature, Self-Healing Foam replaceable insert, which means it'll take countless practice sessions to wear this target out. It measures 19-inches tall and 31-inches long, mimicking a 75-pound Javelina. As you would expect from Rinehart, the Javelina target has real-life sculpted features and scoring rings, making it a great practice target or fun 3D range target. Like other Woodland Series targets, the Javelina is compound bow and crossbow compatible, so shoot away! It carries an MSRP of \$129.99 and will be available early 2020.

Rinehart Targets are widely known as the most reliable and durable targets available today due in no small part to these high quality construction standards. All Rinehart Woodland Series targets have a unique foam construction which ensures they are resistant to UV rays and the harshest weather Mother Nature can dish out, making them ideal for year-round practice anywhere. Arrow removal is simple thanks to the durable Signature foam construction that can stop even the fastest arrows. After countless hours of practice lead to a need to replace the core, Rinehart's exclusive patented locking insert system (sold separately) makes replacement fast and easy.

#### *About Rinehart Targets*
