FAST AND FRIENDLY BRASS SIMPLIFIES THE DILLON SUPER 1050/RL1100 PRIMING SYSTEM

New FFB Primer Vibe Delivery System Makes Loading Safer and Consistent

Farmington, MO - [Fast and Friendly Brass](#), a premier brand in tooling and processing equipment and supplies for optimal efficiency in brass loading and reloading, has fixed the weakest link in the Dillon Super 1050 and the RL1100 - the primer loading system. The new Primer Vibe Delivery System takes out the moving parts and makes loading rounds more effective and much safer.

“The last thing you want to have happen with your Dillon Precision press is an issue with the primer loading,” said Bill Birmingham, Owner of Fast and Friendly Brass. “The stock Dillon shuttle actuation arm has springs that break, and an arm that will bend and eventually break due to fatigue. Then, if a primer doesn't drop properly into the shuttle and the shuttle moves, the primer can detonate. This can cause any primers in the vertical tubular column to detonate, causing an explosion. We know of more than one person to be injured from this design.”

The Fast & Friendly Brass Primer Vibe Delivery System removes the moving parts in the process of delivering primers to the stock Dillon primer punch. These moving parts are replaced with a vibratory bowl and chute system that accurately delivers primers to the punch that inserts them into the brass case using the stock Dillon priming mechanism. If there is a primer detonation, you're protected thanks to a 12-inch tall, ¼-inch thick, polycarbonate safety shield.

The Primer Vibe Delivery System has a primer delivery speed of up to 15,000 per hour and comes with parts to convert to all primer sizes - small pistol/rifle and large pistol/rifle. You can convert primer sizes in less than 10 minutes, too, making switching things around faster and easier. The Primer Vibe Delivery System is available for all major auto-drives, including the FFB, Mk7, Ammobot, and Forcht.

You get the Vibratory Base and Vibratory Base Stand specifically made to the height of your auto-drive. You also get a Vibratory Controller and our 3D printed bowl, primer discriminators, and the chute. There is our polycarbonate safety shield and primer punches and bushings made to SAAMI specifications. F&FB also includes all the required fasteners. This unit comes with a one-year warranty on the Primer Vibe Base and the controllers, and a three-year warranty on the 3D printed parts. For more information, go to the [F&FB website](#).

About Fast and Friendly Brass

Fast and Friendly Brass is owned in whole by Bill Birmingham of Farmington, MO. The company started out processing and selling brass in the St. Louis area in 2012 and nationally in 2014. In late 2015 Fast and Friendly Brass stopped processing brass to focus on a bigger need in the market - better tooling and equipment to improve the efficiency of reloading and brass processing. Since then, the company has become an industry leader in high-quality products to make reloading more precise and efficient. Learn more at fastandfriendlybrass.com.
